DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-16 rejected under 35 U.S.C. 102(e) as being antipated by Vesikivi et al., (US 6,978,118).

As per claims 1-16, Vesikivi teaches an apparatus for managing an address book in a portable wireless terminal, the apparatus comprising:
a radio frequency identification (RFID) recognition section for receiving information transmitted from an RFID chip after transmission of an electric wave, storing and reading received information, and converting read information into data suitable for an

Art Unit: 2182

address book (Fig. 8, col. 9, lines 3-col. 10, lines 1-33) ; a display section for displaying data for management of the address book; a user command input section for inputting a command for an address book management by a user; an address book storage section for storing information; and a control section for controlling an operation of the RFID recognition section, so as to transmit the converted data to the address book storage section according to a user command, thereby storing the data. (Vesikivi, cols. 2-10)

Vesikivi teaches a system including a portable wireless terminal that receives and transmits information including information for updating an address book located on the portable wireless terminal using RFID. Vesikivi specifically teaches wherein a RFID business card can communicate with the portable wireless terminal in order to update an address book, e-mail, or calendar information on the portable wireless terminal. Vesikivi also teaches wherein the user is given the opportunity to selectively store the updated data or disregard the information received from the business card.
